

CARE AND MAINTENANCE PROCEDURES

The following procedures are key in helping to preserve your turf.

- Keep it clean
- Vacuum periodically
- Do not abuse

I. Keep it clean

- A. For lightly soiled areas, it may be necessary to sponge mop with a five (5) percent solution of low sudsing household detergent in warm water followed by a thorough rinsing with warm water. For heavily soiled areas, repeat procedure. For lightly soiled areas follow with sponge mopping using a three (3) percent solution of household ammonia in warm water followed by a thorough rinsing with warm water.

B. Stains and other blemishes

The first rule is promptness. It is always easier to clean up a fresh spill than one that has dried and hardened. Remove any solid or paste-like deposit with a spatula or table knife. Blot up excess liquids with paper towels, a clean cloth, or a dry absorbent, such as kitty litter or Fuller's Earth. Dry absorbents can then be swept or vacuumed up afterwards.

Synthetic fibers have high resistance to staining. However, it is important to realize they are only one part of a sophisticated system of various components designed for overall performance. Some cleaning agents safe for the face fibers can be harmful to other components of the turf system. Therefore, cleaning agents are grouped into two sets, one of which can be used in liberal amounts directly on the turf surface, and the second of which should only be applied by rubbing a cloth soaked in the cleaner in order to minimize penetration of possible harmful agents below the turf surface. In the first group of cleaners (which generally can be applied without any special precautions) are the following:

- A warm, mild solution of granular household detergent or any low sudsing detergent for fine fabrics. Use approximately one teaspoon to one pint of water. This will handle most waterborne stains including:

Coffee	Ketchup
Tea	Butter
Fruit juices	Alcohol
Vegetable juices	Cola
Milk	Water colors
Cocoa	Latex paint
Ice Cream	Blood
Mustard	Urine
Glue	Dye

- A three (3) percent solution of ammonia in water may be used in lieu of household detergent for more stubborn stains.
- Do not use cleaners that contain chlorine bleaches or caustic cleaners (pH above 9) or highly acidic cleansers (pH below 5)
- Rinse area thoroughly with clean warm water to remove any traces of soap or ammonia
- Blot up excessive liquid

The second group of cleaners, where agent must be applied sparingly and care taken to avoid penetration beneath the turf are the following:

- Mineral spirits or a grease spot remover like perchlorethylene (dry cleaning solution) of the type sold by most variety stores and supermarkets. In general, cleansers in this category should handle most oil-based stains including:

Asphalt and tar	Chewing gum
Cooking oil	Shoe polish
Floor wax	Lipstick
Motor oil & grease	Paraffin wax
Ballpoint ink	Nail polish
Suntan oil	Crayon

Caution: mineral spirits and other petroleum-based solvents are flammable. Do not smoke or permit open flames near where these are being used.

Be sure the area is well ventilated where solvent cleaners are used.

C. Animal waste

Neutralize with mixture of white distilled vinegar in an equal amount of water.

D. Chewing gum

In addition to dry cleaning fluid, chewing gum can be removed by freezing. Aerosol packs of refrigerant are available from most carpet cleaning suppliers for this purpose, or dry ice can be used. After freezing, scrape with a knife.

E. Commercial cleaning

Your turf can be commercially cleaned with a steam/extraction method. Be certain the cleaning company knows the turf has a polyurethane foam backing and utilize minimal moisture when possible.

II. Vacuum

A. Vacuum your turf as needed to remove dirt and debris.

B. Position entry matting strategically to minimize dirt being tracked onto your turf. Use dedicated footwear when possible.

III. Do not abuse

Although your turf is made of tough, durable fibers, certain precautions should be taken to prevent damage to the turf.

- Lighted cigarettes cannot ignite the turf, but they can damage the turf by fusing the tips of the fibers together. Cigarettes, fireworks, and open flames should be kept away from the turf.
- Furniture and equipment with sharp or jagged edges should not be placed on turf as this may puncture or tear the turf. Always install felt pads to bottom of any furniture to reduce puncture marks
